CERTIFICATE

The report of the project Using PHP & MySql, titled Personal Information System submitted by **Suchandra Roy** (University Roll no. 11701015047, of MCA 6th semester of 2018) and Binayak Sushil Sharma (11701015013) has been prepared under our supervision for partial fulfilment of the requirement for MCA degree in Maulana Abul Kalam Azad University of Technology.

Countersigned by:

Head of The Department
RCC INSTITUTE
OF INFORMATION TECHNOLOGY
KOLKATA - 700015, INDIA

The project is hereby forwarded by:

_____

Department of Computer Application

_____

RCCIIT,(Internal Supervisor)

<u>ACKNOWLEDGEMENT</u>

I express my sincere gratitude to our project guide, Asst. Prof. **Biswanath Chakraborty,** department of Computer Application, RCCIIT for extending his valuable time for us to guide and set up this project.

I am also indebted to **Arup Kumar Bhattacharjee** Head of the Department, MCA, and RCCIIT for his unconditional help and inspiration.

I would like to thank my **parents** for being supportive all the time, and I am very much obliged to them.

➢ CONTENTS :

➢ PROJECT OVERVIEW

To store records of each employee, who is recruited as a new employee as well as existing employee of the college.

The project "Teacher's Records Keeping Portal", we use; HTML, CSS & Java Script as front end, PHP as back end support and MySQL for Database support.

Initially, Administration will enter very basic details of new/existing faculty, and then a unique Id and Password will generate for each employee.

During first time login by employee, our system will ask to change their password. After that, user can upload required details like personal qualification, experience, publication details etc

➢ PURPOSE OF THE SYSTEM

Employee can update their profile on regular basis, As an when required administration can view/generate faculty profile, Each faculty can print/export to PDF of their profile, Service book may be maintained through this software.

➢ EXSISTING SYSTEM

The existing system keeps record of the employees; newly recruited or already existing. At first user makes his/her account on the system administered by the admin with the user-id and temporary password and general information like name, department, designation, date of joining.

The user, once after logging in with temporary password is prompted with a window requesting to change the password, after which he/she gets into a serialized process of uploading their personal details, academic information, and file uploads etc.

➢ FEATURE OF THE PROPOSED SYSTEM

➢ Every user has an account.
➢ User can store their personal, academic details, passport size photo.
➢ Upload PDF/image of mark-sheets/certificate, research/journal publications.
➢ User can also update their provided information and uploaded files.

- ## SOFT WARE REQUIREMENT SPECIFICATION (SRS)

  - ### SEGMENTS OF PROJECT

    The project includes three sections or events:

    - Administration will enter very basic details of new/existing faculty, and unique Id and Password will be generated for each employee.
    - Each employee store records, who gets recruited as new employee as well as existing employee of our college.
    - Employee can update their profile on regular basis.

- ## TECHNOLOGIES USED

  For the project "Teacher's Records Keeping Portal", we use;

  HTML, CSS & Java Script as front end,

  PHP as back end support,

  MySQL for Database support.

- ## RELIABILITY

Every user has an account; user can store their personal, academic details to the database. A 'Forget Password' mechanism has been added to the system, which is directly handled by the admin.

- ## MINIMUM HARDWARE AND SOFTWARE REQUIREMENTS

  - ### ❖ Minimum hardware requirements
    - ✓ 800 MHz Processor
    - ✓ 2 GB RAM
    - ✓ 250 MB Hard Disk Drive

  - ### Minimum Software requirements
    - ✓ Windows Operating System
    - ✓ PHP version 5.x
    - ✓ XAMP server

SET PASSWORD

LIMATIONS:

Since this application is developed in android, it is not possible for the iOS users and others without an android device to gain access to this app.

FUTURE SCOPE

On clicking the markers on the map, the whole information about a particular event can be displayed on map screen itself.

There is no end for an application to be more users friendly so this application is no exception. This system would be made applicable to work in various other zones step by step.

CONCLUSION:-

This system has been developed for run in an android operating system. It uses internet to track user current location and display nearby puja pandals and restaurants.

It has a nice change of being develop at an even better scale with time.
